

HOW TO TALK WITH YOUR DOCTOR ABOUT LIVMARLI

A Guide for Caregivers and People With Cholestatic Pruritus (Itch) in Alagille Syndrome

Itch caused by liver disease—also known as cholestatic pruritus—is one of the most burdensome symptoms of Alagille syndrome.

Itch can impact daily life in many ways. At times, it may be difficult to talk openly with your doctor about the challenges of the itch.

If you or your child are unsatisfied with your current treatment for itching or are ready to start treatment for the itch, use this guide to help you explain how itch affects you and your family, and whether LIVMARLI may be right for you or your child.

INDICATION

LIVMARLI is a prescription medicine used to treat cholestatic pruritus (itch) in patients who are 3 months of age and older with Alagille syndrome.

It is not known if LIVMARLI is safe and effective in children with Alagille syndrome who are under 3 months of age. It is not known if LIVMARLI is safe and effective in adults who are 65 years of age and older.

IMPORTANT SAFETY INFORMATION

What are the possible side effects of LIVMARLI?

LIVMARLI can cause serious side effects, including:

- **Liver injury.** Changes in certain liver tests are common in patients but may worsen during treatment with LIVMARLI. These changes may be a sign of liver injury and can be serious. Your health care provider should do blood tests and physical exams before starting and during treatment to check your liver function. Tell your health care provider right away if you get any signs or symptoms of liver problems, including:
 - nausea or vomiting
 - your skin or the white part of your eye turns yellow
 - dark or brown urine
 - pain on the right side of your stomach (abdomen)
 - fullness, bloating, or fluid in your stomach area (ascites)
 - loss of appetite
 - bleeding or bruising more easily than normal, including vomiting blood

What Your Doctor Should Know About the Itch

When it comes to assessing itch, doctors may only be looking for things like red marks, scratches, and open wounds. But these signs of the itch may not tell the full story. That's why it's important to describe the other ways that itch impacts you and your family. When you share more details, your doctor can make a more accurate assessment.

Ready to Assess the Itch

When it's time to speak with your doctor, consider sharing answers to the following questions.

In what ways does itching impact...

- Your child's and/or your daily life:

- Falling asleep and/or staying asleep:

- Family life and/or relationships with friends and family:

- School, work, and/or home life:

- Playtime with friends and/or participation in activities:

- Mood and/or behavior:

- Additional impacts:

Notes:

IMPORTANT SAFETY INFORMATION (cont'd)

- **Stomach and intestinal (gastrointestinal) problems.** LIVMARLI can cause stomach and intestinal problems, including diarrhea and stomach pain during treatment. Diarrhea can also cause the loss of too much body fluid (severe dehydration). Your health care provider may advise you to monitor for new or worsening stomach problems, including stomach pain, diarrhea, blood in your stool, or vomiting

Please see Important Safety Information throughout and full [Patient Information](#).

What Your Doctor Should Know About the Itch

How often does itching impact daily life?

- Every day 1 to 2 times per month
- 1 to 2 times per week Never
- 3 to 4 times per week

How much relief do you or your child get from your current itch treatment?

- Complete relief I don't know
- Some relief I am not currently treating my itch
- No relief at all

Do you and/or your child use work-arounds for the itch? If yes, check all that apply.

- Wearing mittens to avoid scratches Keeping baths and showers short
- Avoiding hot temperatures Using cool or lukewarm water when bathing
- Using lotions for the itch Avoiding certain clothing
- Keeping fingernails short Other: _____

What might improvement in the itch mean for you or your child?

If you or your child is experiencing frequent, disruptive itching, there may be more that can be done. Discuss the itch with your doctor. **Together**, you can explore your treatment options.

IMPORTANT SAFETY INFORMATION (cont'd)

Tell your health care provider right away if you have any new or worsening signs or symptoms of stomach and intestinal problems, including:

- diarrhea
- more frequent bowel movements than usual
- stools that are black, tarry, or sticky, or have blood or mucous
- severe stomach-area pain or tenderness
- vomiting
- urinating less often than usual
- dizziness
- headache

CHECK IT. CHART IT. DISCUSS IT.

Logging your symptoms can help your doctor better assess the itch and see if treatment is working. If you haven't been recording your itch, that's OK. You can talk to your doctor about symptoms that you're currently experiencing.

Working Together to Manage the Itch

If you or your child are ready to start treatment or are unsatisfied with the way the itch is currently being managed, you may be a candidate for LIVMARLI.

LIVMARLI is an **FDA-approved treatment** that can improve the itch for people with Alagille syndrome who are 3 months of age and older.

To make the most of your appointment time, consider asking the following questions during your next visit:

About LIVMARLI

- Could LIVMARLI be an option for me or my child?
- How does LIVMARLI work?
- How is LIVMARLI taken?
- How long could it take for LIVMARLI to work?
- How can I know if LIVMARLI is working?

Monitoring

- How is progress monitored?
- Are lab tests needed to monitor progress while taking LIVMARLI?
 - If yes, which ones?

Safety

- What are the possible side effects of LIVMARLI?
- How can they be managed?
- Can LIVMARLI be taken if I or my child have other health conditions or take other medicines?
- Where can I find information on previous clinical trials?

Support

- How do I get LIVMARLI?
- What support is available to help me or my child?

Notes:

IMPORTANT SAFETY INFORMATION (cont'd)

- A condition called **Fat-Soluble Vitamin (FSV) Deficiency caused by low levels of certain vitamins (vitamin A, D, E, and K) stored in body fat.** FSV deficiency is common in patients with Alagille syndrome but may worsen during treatment. Your health care provider should do blood tests before starting and during treatment, and may monitor for bone fractures and bleeding, which are common side effects

Tell your health care provider about all medicines that you take, as LIVMARLI may interact with other medicines.

If you take a medicine that lowers cholesterol by binding bile acids, such as cholestyramine, colestevlam, or colestipol, take it at least 4 hours before or 4 hours after you take LIVMARLI.

Your health care provider may change your dose, or temporarily or permanently stop treatment if you have certain side effects.
